DETAILED ACTION

Examiner's Amendments

- 1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee. The application has been amended as follows:"
- 1. An optoelectronic module, comprising: a housing, a carrier element having electrical connection electrodes and electrical lines; at least one semiconductor component for emitting or detecting electromagnetic radiation, said semiconductor component being applied on the carrier element, [[and]] being electrically connected to connection electrodes of the carrier element and being encapsulated with a casting compound whose outer surface forms [[comprising]] a radiation coupling area, wherein the outer surface is remote from the housing; at least one optical device assigned to the semiconductor component; and a connecting layer made of a radiation-transmissive, deformable material arranged in a gap between the radiation coupling area of the semiconductor component and the optical device, the connecting layer being at least partly cured, wherein after the connecting layer is applied, the optical device and the semiconductor component are fixed relative to one another and pressed against one another, thereby squeezing the at least partly cured connecting layer arranged therebetween, wherein the connecting layer contacts both the radiation coupling area of the semiconductor component and the optical device, and wherein the squeezed connecting layer generates an opposing force that strives to press the optical device and the radiation coupling area of the semiconductor component apart.

Art Unit: 2812

10. A method for producing an optoelectronic module comprising the steps of: providing a housing, providing a carrier element having electrical connection electrodes and electrical lines; providing a semiconductor component for emitting or detecting electromagnetic radiation, said semiconductor component being encapsulated with a casting compound whose outer surface forms [[having]] a radiation coupling area, wherein the outer surface is remote from the housing; providing an optical device; applying the semiconductor component on the carrier element and electrically connecting the semiconductor component to the connection electrodes; mounting the optical device above the radiation coupling area of the semiconductor component; and prior to mounting the optical device, applying a curable and, when in a cured state, a radiation-transmissive and deformable composition at least over the radiation coupling area of the semiconductor component, wherein the applied composition is at least partly cured or let to be cured, and wherein, after the composition is applied, the optical device and the semiconductor component are fixed relative to one another and pressed against one another, thereby squeezing the at least partly cured composition disposed therebetween, wherein the composition contacts both the radiation coupling area of the semiconductor component and the optical device; and wherein the squeezed applied composition, generates an opposing force that strives to press the optical device and the radiation coupling area apart.

Cancel claims 18 and 19.

Examiner's Reasons for ALLOWANCE

- 2. Claims **1-17** are allowed over prior art of record.
- 3. The following is an examiner's statement of reasons for allowance: None of the references in the prior of record disclose or render obvious, inter alia the invention disclosed by claims 1 and 10.

It would not have been obvious to a person of a person of ordinary skill in the art at the time the invention was made, to modify the disclosure of Webster (U.S. Patent No. 6455774) and further include the teaching of Fukamura et. al (U.S. Patent No. 6,627,872), because the optical device is not just pressed once to squeeze the cured or partly cured connecting layer (composition), but the connecting layer (composition) must remain continuously pressed such that the connecting layer (composition) exerts a force that strives to press apart the optical device and the casting compound encapsulating the semiconductor component, wherein an outer surface of the casting compound (radiation coupling area) is remote from the housing and contacts the connecting layer (composition).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to PAPE SENE whose telephone number is (571)270-5284. The examiner can normally be reached on 5/4/9.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Charles Garber can be reached on (571)272-2194. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
